WESTMORELAND CLEANWAYS AND RECYCLING RECYCLING GUIDE

Updated as of 03/19/2021

INTRODUCTION

Westmoreland County's recycling landscape is constantly evolving. Opportunities exist now for recycling a wide range of materials that did not exist just a few years ago. Some of the factors affecting recycling are:

- ▲ Single Stream Recycling became widely available to the Westmoreland County market in 2007.
- ▲ The availability of single stream processing has allowed haulers to upgrade municipal curbside recycling programs from accepting just a few items to accepting the full single stream range of recyclables. Be sure to check your municipality's program to see if curbside single stream is available to you.
- ▲ See Important Message about Contamination in your Recycling on Page 21 and changes to Single Stream acceptable material on P. 23
- ▲ Passage of Act 108 of 2010, the Covered Device Recycling Act (applies to computers and television) and the proper disposal of other e-waste as a growing environmental danger.
- ▲ Much has been made of the *improper* disposal of e-waste, with cargo shipments of waste going to underdeveloped nations where the toxic byproducts end up in water systems and worse. Westmoreland Cleanways qualifies each vendor it endorses to be sure the e-waste is recycled or disposed in an environmentally secure manner.
- ▲ The economy of recycling: Recycling is as much a business decision as it is environmental. Source reduction is becoming a preferred way of dealing with waste and reducing cost. The "Zero Waste" philosophy ... "conserves energy, mitigates climate change, reduces water usage, prevents toxics creation, and minimizes ecosystem destruction." *source EPA*
- ▲ Recycling is no longer "free" (it actually never was, but the cost was hidden). People are making a conscious choice to recycle. It is the right thing to do, a way to conserve our natural resources, and eliminate hazards from our environment.
- ▲ Recycling can be a wise economic decision if the cost of throwing something away exceeds the cost of recycling. Proper waste management, from waste reduction to recycling, is a great way to reduce operating cost when every dollar counts.

Zero Waste, Sustainability, Extended Producer Responsibility ... these philosophies continue to drive the recycling and waste management landscape. The recycling industry continues to evolve to meet the demands of people who are no longer willing to settle for "it can't be done." New markets are developing to use recycled content material; improved technology results in cleaner processing, which makes recyclables more valuable; and, more businesses are finding solutions to make the waste management industry more responsive and sustainable.

This Recycling Guide lists opportunities to recycle or properly dispose of everything from plastic bottles to thermometers to used cooking oil. It is comprehensive, but no doubt some opportunities will be missed that would make the guide complete. We make every effort to stay abreast of the evolving recycling world, to anticipate new trends, to educate consumers and businesses on new recycling laws and opportunities, and to develop new programs to meet the environmental and disposal needs of our residents.

Feel free to contact us with questions or opportunities that aren't listed or should be listed in future editions.

Ellen C. Keefe, Executive Director

Natalie Reese, Program Director

WESTMORELAND CLEANWAYS RECYCLING CENTER

GPS Address:

355 Pleasant Unity-Mutual Road
Greensburg PA 15601

www.westmorelandcleanways.org

Ph: 724-879-4020

Hours of Operation:

Mondays Noon—5 p.m.

Wednesdays 8 a.m.—1 p.m.

Fridays 8 a.m.—1 p.m.

2nd Sat. of each Month, 8:30 a.m.—Noon

Separate material as follows for ease in unloading vehicles:

Cash, debit/credit and checks accepted

Glass bottles and jars: CLEAN clear, green, and brown

NO CHARGE

- Sort by color: clear, green, brown (no blue glass)
- Remove lids and corks, metal lids can be recycled with scrap metal

Refrigerant-containing Appliances (frig, freezers, A/C, dehumidifiers, etc.):

\$20.00/unit

Scrap Metal (non-refrigerant appliances, propane tanks, gas grills, lawn mowers, car parts, tools, misc.):

NO CHARGE

Electronics

Must be Recycled by Law: (anything directly connected to a computer system):

Whole, Intact, Complete TVs—all types CRT tube; flat screen, plasma, rear projection, consoles

NO CHARGE

Computer monitors—CRT tube, flat screen, and LED/LCD

NO CHARGE

CPUs/Towers, Laptops, iPads, tablets

NO CHARGE

Peripherals (mice, keyboards, speakers)

NO CHARGE

Printers and All-in-One Printers

NO CHARGE

Disassembled/smashed/stripped CRT TVs and monitors

\$25 Hazardous waste handling fee

Accepted at the center, but not required by law to be recycled

NO CHARGE

Answering Machines

Docking Stations

Microwaves

Telephone systems

Camcorders

Electric typewriters

Pagers

Testing equipment

Cameras

Electrical Cords

Radios

VCR/DVD players

Cell phones

Fax/copy machines/duplicators

Remote Controls

Video games/cartridges

Christmas lights

Gaming consoles/controllers

Stereos/tape/CD players

EPS (expanded polystyrene) #6 Foam (commonly referred to as Styrofoam):

NO CHARGE

Separate by type:

- White Block Packaging Foam, Coolers
- Colored and white food service trays (CLEAN OFF ALL FOOD RESIDUE): cups, plates, grocery store trays, egg cartons, fast food containers

NOT RECYCLABLE: Packing peanuts, Rigid foam sheet insulation typically used in construction; "Spongey" block packaging

Tires

Passenger/Light Truck Tires: \$3.00 Off Rim/\$4.00 On Rim*

Tractor Trailer: \$15.00 Off Rim/ \$18.00 On Rim*

Agricultural/farm tractor: \$80.00*

Highway/construction/heavy equipment: \$80.00*

*Members receive a discount

Lead Acid Batteries

NO CHARGE

Uninterruptible Power Supplies (UPS):

NO CHARGE

Motor Oil:

NO CHARGE

Bulbs and Fixtures:

CFL (compact fluorescent)/small LED

NO CHARGE

Ballasts (PCB or non-PCB)

\$5.00/each

Specialty bulbs: fluorescent tubes 4ft or smaller, u-bend, halogen, HID, high pressure sodium, LED, etc.

\$1.00/unit

Fluorescent tubes 8ft or longer

\$2.00/each

Paper as listed (separate by type):

NO CHARGE

- Cardboard (corrugated, chip board, cereal boxes)
- Books (hard and softback)
- Sorted Office Paper (white; staples and paperclips OK)

- Newspaper (black and white, color inserts)
- Mixed paper (file folders, junk mail, magazines, phone books)

Westmoreland Cleanways & Recycling
128 Innovative Lane
Suite 2000
Latrobe, PA 15650-5462

Dear Westmoreland County Recycling Coordinator,

Most recently, we have been seeing a growing trend in recycling contamination. *Contamination is a big issue.* While it always makes sense to recycle paper, metals and plastic bottles – the addition of non- recyclable items in curbside programs can really effect recycling efficiency, and lower the value of the recycling commodities.

As you might already know, now, more than ever, it is critical we focus on cleaning up contamination. Along with a ban of 24 materials, China has also finalized its contamination standards in January of this year, limiting contamination for any material imported into the country to less than 0.5%. These regulations require all markets to continue focusing on quality, which starts with the material we accept at our facilities.

China is the largest importer of recyclables in the world. The focus to clean up contamination is incredibly important to the quality of recycling programs. If you care about the long-term sustainability of recycling, you should do everything you can to eliminate some of the issues facing the industry.

Waste Management is going to continue working on battling contamination to ensure we are able to provide good, quality material for the market. Unfortunately, to do this, we must enforce the best recycling practices curbside.

You may have already heard from some of your constituents about Waste Management enforcement, and we wanted to bring you up to speed on the messaging we are sharing, and the recycling do's and don'ts we are asking residents and customers to follow.

Effectively immediately, we are asking all commercial and third-party Material Recycling Facility customers to remove plastic bags from their collection stream. In addition, we are spot checking all commercial containers at the curb, and if we see heavy contamination, we may reject contaminated loads and seek reimbursement for resulting operational costs & losses. Some customers may receive a monetary penalty for recycling loads rejected due to contamination.

We will also be working with our residential customers and contracts to make every effort to remove plastic bags from the curb. When possible, we will also be working with our customers to roll out direct education campaigns to address additional contamination.

In addition to plastic bags, glass is also a big issue for the recycling industry. Due to minimal outlets and rising processing costs, we are trying to move away from glass recycling. Glass is also very rough on our machines, and does heavy damage to our sorting equipment and fiber stream. We are currently working with customers to remove this material from the stream, but intend to honor all contracts that require us to process glass.

If you have any questions or need any additional information, please do not hesitate to reach out to Waste Management directly. We are driving customers to www.RecycleOftenRecycleRight.com for information, education and signage.

Thank you for your commitment to help us recycle quality material that can be used by manufactures to create new products. By helping to clean up recycling, we are able to keep the costs down for our customers, while lowering our impact on the use of natural resources.

Best Regards,

Robert Johns, Manager
Pittsburgh Materials Recovery Facility

CURBSIDE MUNICIPAL RECYCLING PROGRAMS

*Denotes mandated municipality. Residents of mandated municipalities (PA municipalities with >5,000 residents and population density of 300/square mile) are required to recycle, and the municipality is required to make available curbside recycling service and leaf waste collection to their residents. This service can be provided by the municipality, through a hauler contract with the municipality, or through private subscription.

- ♻️ Single Stream Recycling: includes ALL of the following materials in one "stream", meaning material does not have to be sorted. Single stream collections may include any or all of these materials. Check with your hauler directly if you have any questions:
- Aseptic cartons (milk, broth, drink boxes);
 - Aluminum cans, bimetal cans, pie tins;
 - #1 and #2 plastic jugs and bottles only, including bottle caps;
 - mixed paper; cardboard and chipboard.
 - **NO GLASS, NO PLASTIC BAGS**

DRUGS / PHARMACEUTICALS DISPOSAL

Preparing items for disposal at a MedReturn location

- All pharmaceutical drugs to be disposed must be in a sealed container such as the original container or a zip-lock bag. They cannot be put into the MedReturn box loosely.
- Personal information should be removed or blotted out with a permanent marker.
- Liquid pharmaceuticals are not accepted. Pour over coffee grounds or cat litter; seal in zip-lock bag and throw in trash.

Items Accepted**

- Prescription and over-the-counter solid medications, creams, ointments
- Tablets and capsules
- Pet medicines

Items NOT Accepted**

- Intravenous solutions
- Injectables, syringes, and needles (i.e. EpiPens)* These items should be taken to a health care professional's office or to a hospital for proper disposal.
- Hydrogen peroxide
- Compressed cylinders or aerosols (e.g., asthma inhalers)
- Iodine-containing medications
- Thermometers
- Alcohol & illicit drugs (i.e. marijuana, heroin, LSD, etc.)

***Please check with your drop off location for a complete list of items accepted or not accepted.*

RECYCLING DEFINITIONS

Following are some definitions used in the recycling and solid waste industry that you may find useful and sometimes amusing.

Act 101: Pennsylvania's recycling law passed in 1988; defines which municipalities, businesses and institutions must recycle, what materials are considered recyclable, and consequences of non-compliance.

Act 108 of 2010: Covered Device Recycling Act: bans certain electronic waste from landfill disposal. Covered devices include computers, monitors and peripherals, laptops, and televisions.

Act 140: Passed in 2006, further defines and strengthens provisions of Act 101.

Aluminum can: beverage container made from aluminum

Aseptic containers: food and beverage cartons made of multi-layer plastic, paper and metal packaging. This includes refrigerated cartons - such as milk or juice cartons, and shelf-stable cartons - such as broth or almond milk cartons.

Baler: a machine that compacts certain waste materials into rectangular bundles to reduce volume and to aid in transporting.

Bauxite: Claylike amorphous material, the main ore for the production of aluminum

Bi-metal can: a can made from 2 or more metals, usually a steel body and aluminum lid

Biodegradable: Capable of being converted into basic compounds or elements by bacteria

Bulk Goods: Refers to household appliances (washers, dryers, refrigerators, etc.). The salvage industry extracts valuable metals from these items. Also see WHITE GOODS

Commingled Recycling: The pick-up of several recyclable materials mixed together; usually does not include fiber. May include plastic, glass, and metal containers.

Commodity: A recyclable material with economic value.

Contaminant: A material that is harmful to the recycling process or that destroys the value of the recyclable material.

Construction Waste (also Construction and Demolition, or C&D): Waste material produced in the construction of homes, buildings, etc. Includes lumber, metal, sheet rock. Clean C&D can be recycled. C&D from old building demolition cannot be recycled. Must be taken to a permitted C&D facility to ensure recycling.

Covered Devices Recycling Act (CDRA): see Act 108 of 2010

Cullet: Scrap glass, usually broken in to small uniform pieces. This is how glass is typically marketed for resale/recycling.

Curbside Collection: Collection of recyclables or trash directly from a resident's home.

De-inking: Process of removing inks and dyes from printed paper for use in making new paper.

Dirty MRF: Material recovery facility where recyclables are removed from municipal solid waste.

Diversion: Finding other means of disposing waste rather than landfilling, such as recycling, reusing, or composting.

Drop-off Recycling: System where recyclables are collected at a central location in a community, typically for use by the general public.

Extended Producer Responsibility (EPR): A movement to put the responsibility (and cost) for recycling and/or proper disposal of a material onto the manufacturer. This is a growing trend in other countries, and in some industries such as electronics.

Ferrous Metals: Metals with iron content; a magnet will stick to ferrous metal.

Fiber: Refers to any paper or paper-like stock made from plant material. Includes cardboard, fiberboard, chipboard, office paper, kraft paper, newsprint, glossy paper, and similar materials. Usually collected separately from other types of recyclable material. See COMMINGLED RECYCLING

Food Waste: Household or restaurant table scraps; Produce left over or otherwise not suitable for sale by grocery stores, markets, etc.

Food and beverage containers: Containers made from plastic, glass or metal for storing food and beverages.

Gaylord box: Reusable corrugated (or other construction) container for storing and transporting recyclables. Typically 4' square; can be moved on a pallet.

Heavy Metals: Metals such as cadmium, lead, and mercury that are persistent in the environment and are poisonous. Heavy metals are found in all electronics; thus the need for proper handling and disposal.

Household Hazardous Waste (HHW): Waste material generated in a household that may cause or contribute to human illness and/or environmental damage if not managed properly.

Junk: Residential or commercial waste having no apparent commercial value.

Leaf Waste: Leaves, garden residue, shrubbery and tree trimmings; does NOT include grass clippings. Leaf waste is BANNED from being disposed in landfills by PA Act 101; must be collected through a curbside collection in all mandated municipalities.

Mandatory recycling: Recycling program required by PA Act 101.

Mixed Paper: Category of waste paper that typically includes newsprint (black & white and color inserts), office paper, junk mail, magazines/catalogs, and telephone books.

Mobius: A mobius loop is the symbol often referred to as the recycling symbol. It consists of three arrows pointing at each other, forming a type of triangle. The concept is that the cycle of natural resources has no beginning and no end.

Municipal Solid Waste (MSW): That category of waste produced by consumers; generated in households, offices, lunchrooms, institutions. DOES NOT include manufacturing or industrial waste or scrap.

Non-ferrous Scrap Metal: Metals that contain no iron; not magnetic. Ex: aluminum, brass, copper, etc.

OCC: Old Corrugated Cardboard

Organic Waste: Any waste derived from plant or animal tissue. May include paper, wood, food and yard waste.

Pallets (or skids): roughly 4' x 4' wooden platforms used for shipping. Can be re-used until broken; can be chipped for mulch if clean; make excellent multi-bin compost bins.

Pay-As-You-Throw (PAYT): Also called bag system or sticker system. PAYT programs charge residents for waste removal services based on the quantity of material discarded. Theoretically, PAYT encourages people to recycle and reduce their waste, because the more material that is recycled or otherwise removed from the waste stream, the lower the waste bill.

Plastics: Man-made material derived from fossil fuel. See Resin Code Chart on P. 7 for commonly used grades of plastic.

Pre-Consumer Waste: Waste material generated through the manufacturing process (such as printer scrap, metal shavings, defective pieces that are not used as a finished product, and the like).

Post-Consumer Waste: Materials that have been discarded by the buyer or consumer, as opposed to leftovers or scrap from industrial or manufacturing processes (see PRE-CONSUMER WASTE).

Rare Earth Metals: are a set of seventeen [chemical elements](#), specifically the fifteen [lanthanides](#) plus [scandium](#) and [yttrium](#), that contain unique properties that have enabled the miniaturization of electronic components including capacitors, lasers and powerful magnets.

Recyclable Material: Any material that can be remade into another product.

Recycle: To transform a waste material for use as an ingredient to manufacture another product.

Re-use: To use a waste product over again or for another purpose (without changing its form).

Recycled Content: The percentage of waste material used in the manufacture of a new product as compared to virgin content.

Residual Waste: Non-hazardous industrial waste that sometimes requires special handling, as opposed to municipal solid waste.

Sanitary Landfill: Site that has been specially prepared for the disposal of solid waste, to avoid contamination of surrounding land, water and air.

Single Stream Recycling: The pickup of all recyclables, regardless of type. May include plastic, glass, metal, fiber, and aseptic containers. SEE "Single Stream Recycling Flyer" for list of items

Solid Waste Management (SWM): Science of planning for, collection, storage, recycling and/or proper disposition of waste.

Sorted Office Waste Paper: Category of paper generally produced in offices to include white office paper, ledger and computer paper.

Steel can: Food or beverage container made of steel; lined with tin plate or sometimes plastic to prevent corrosion and contamination of food.

Sustainable Packaging: Industry movement working across the supply chain to design product packaging with a view toward reduction, re-use, and recyclability.

Tin can: Can made of steel with a tin liner.

Transfer Station: Facility where waste materials from smaller collection vehicles can be taken and transferred to larger transport containers for shipment to landfill or processing center.

UBC: Used beverage container

Virgin Material: Also primary or raw material: New material used for manufacturing basic products (wood pulp, iron ore, silica, bauxite).

Waste Reduction: The prevention of waste at its source by reducing consumption, packaging or other method.

Waste Stream: The material output of an area, location, or facility (i.e. our business's waste stream contains 50% paper that can be recycled).

White Goods: Generally refers to major appliances such as stoves, refrigerators, washers, etc.

Waste-to-Energy: The process of creating energy in the form of electricity or heat from the incineration of waste.

Yard Waste: See LEAF WASTE

DISPOSING OF GENERAL PURPOSE & ALKALINE BATTERIES

Following is information directly from Duracell's website (11/10):

“Alkaline batteries can be safely disposed of with normal household waste. Never dispose of batteries in fire because they could explode.

Due to concerns about mercury in the municipal solid waste stream, we have voluntarily eliminated all of the added mercury from our alkaline batteries since 1993, while maintaining the performance you demand. Our alkaline batteries are composed primarily of common metals—steel, zinc, and manganese—and do not pose a health or environmental risk during normal use or disposal.

It is important not to dispose of large amounts of alkaline batteries in a group. Used batteries are often not completely "dead." Grouping used batteries together can bring these "live" batteries into contact with one another, creating safety risks.

Proven cost-effective and environmentally safe recycling processes are not yet universally available for alkaline batteries. Some communities collect alkaline batteries for recycling—contact your local government for disposal practices in your area.”

What Goes In...To My Single Stream Recycling Bin?

YES: Paper and Cardboard

Corrugated cardboard (boxes) **FLATTENED**
Magazines
Office Paper (all colors)
Newspaper (B&W, color and shiny inserts)
Paperboard (cereal boxes, aka chipboard)
Aseptic cartons (milk cartons/juice/broth)
Junk mail (including window envelopes)
Telephone books

YES: Metals

Aluminum cans
Steel and/or tin cans

YES: Plastics (jars, jugs, bottles, tubs)

#1 & #2
Plastic bottle caps (left **ON** the bottle)

DO:

- Rinse containers of any food or chemical residue
- **Put plastic caps back on plastic bottles.** No need to remove paper or plastic labels or plastic rings
- Flatten cardboard cartons
- No need to remove staples, paper clips or plastic windows from office paper
- Put recyclables loose in recycling bin; take out of plastic bags
- Store together in **ONE** recycling bin

DO NOT:

- Include food or chemical-contaminated containers with other recyclables. Residue can attract vermin & insects; put hauler & processing plant employees in danger; may contaminate other material
- Try to sneak in something that is clearly not recyclable.
- Put paper or cardboard outside where it will get wet (keep in a covered container or wait for a dry day)
- Use plastic bags to store recyclables. They will be treated as trash.

PLASTIC RESIN CODES

Resin Code	Definition
	<p>1 = PETE (or PET) polyethylene terephthalate Commonly used to package soft drinks, water, beer, juice, sports drinks and other beverages, as well as edible oils, salad dressing, peanut butter, various condiments and sauces, and non-food products like household cleaners and personal products.</p>
	<p>2 = HDPE high density polyethylene Commonly used for milk, cider and water jugs, as well as detergent, fabric softener and bleach.</p>
	<p>3 = V vinyl/polyvinyl chloride (PVC) Often used for salad dressing bottles, vegetable oil bottles and mouthwash.</p>
	<p>4 = LDPE low density polyethylene Used for flexible bags for dry cleaning, trash, produce, bread and shrink wrap. Recycled LDPE is often used to make grocery bags.</p>
	<p>5 = PP polypropylene Usually found in drinking straws, battery cases, some dairy tubs, bottle labels and caps.</p>
	<p>6 = PS polystyrene Commonly used for materials like packaging peanuts, plastic utensils, meat and egg trays.</p>
	<p>7 = OTHER other Other plastics are often made of multiple resins or layers of different types of plastics. These may include microwavable packages, snack bags and industrial plastics.</p>

HOW TO PROPERLY DISPOSE OF LATEX AND OIL-BASED PAINT

What to do with left-over paint is one of the most popular questions asked of Westmoreland Cleanways. Following are some general guidelines for proper disposal of the material:

- Any paint, latex or oil-based, that has dried and hardened in the can may be thrown away in the normal trash. Any can with less than one inch of liquid may be thrown away in the normal trash.
- Latex paint is considered non-hazardous and can be dried and thrown away with normal household trash. One effective method involves pouring the paint over an absorbent substance, such as clay-based cat litter or shredded newspaper. Let the cat litter or newspaper dry, put it in a plastic bag and throw away. Let the cans dry and put them in the trash with the lids removed.
- A paint hardener such as “Krud Kutter Waste Paint Hardener,” can be used to dry and dispose of latex and oil-based paint. Many such products are a powder which is poured directly into the paint. Once the paint hardens it can be thrown away with your normal trash. A variety of paint hardeners can be found at local paint retailers.
- If a product like Krud Kutter is not used, oil-based paint is considered hazardous and should be disposed at a household hazardous waste collection event.

How Much Paint Do I Really Need?

The most effective way to reduce the amount of paint for disposal is to purchase only the amount you need to complete the job. To determine the amount of paint you will need, first determine the square footage to be painted, and then divide that by the number of square feet a gallon of paint will cover (approximately 400 sq. ft.). For example, how much paint would be needed using two coats of paint for a 12 foot by 15 foot room with an 8 foot ceiling, one door, and two windows?

- 1) Measure the total distance (perimeter) around the room (12 ft. + 15 ft.) x 2 = 54 ft.
- 2) Multiply the perimeter by the ceiling height to find the total wall area: 54 ft. x 8 ft. = 432 sq. ft.
- 3) Subtract the square feet of the doors (usually 21 square feet) and the windows (15 square feet each for this example) from 432 sq. ft. (which we determined to be the total wall area): 432 - 21 sq. ft. (doors, 1 x 21) - 30 sq. ft. (windows, 2 x 15) = 381 sq. ft. The total square footage to be painted is 381 sq. ft.
- 4) Multiply that by the number of coats needed, 2 x 381 sq. ft. = 762 sq. ft.
- 5) Generally, one gallon of paint will cover 400 square feet. (However, coverage is affected by the texture of the surface and quality of the paint). 762 sq. ft. / 400 sq. ft. = 1.9 gallons of paint.

WESTMORELAND CLEANWAYS AND RECYCLING WHAT WE'RE ALL ABOUT

Westmoreland Cleanways and Recycling is a nonprofit 501(c)(3) organization whose mission is to protect, restore and maintain the environmental qualities of our county for the benefit of all who live, work, and visit herein.

Westmoreland Cleanways and Recycling accomplishes its mission by sponsoring and promoting programs that address the proper disposal of solid waste through recycling, special collections, and the cleanup of illegal dumpsites and littered areas. We educate the public (both youth and adult audiences) through presentations, print media, and the web.

Westmoreland Cleanways and Recycling initiates and facilitates programs by bringing together a network of volunteers, industry leaders, and state and local government representatives to provide services in the most efficient and economical manner.

Westmoreland Cleanways and Recycling is funded by the Westmoreland County Commissioners, membership fees, private donations, sponsorships and grants. Volunteers are the backbone of the organization, donating time, energy, and expertise to carry out its mission.

To learn more about how you can participate in Westmoreland Cleanways' mission, visit us on the web at www.westmorelandcleanways.org, or call 724-879-4020.
